Give me wine

"Give me wine" is a web-based application designed to showcase the rich variety of wines produced in Macedonia. The primary goal of this application is to provide wine enthusiasts, tourists, and locals with an engaging platform to discover and learn about Macedonian wines.

The main thing of our application is the "Give me wine" feature on the homepage. Upon clicking the "Give me wine" button, the application randomly selects a wine from a broad database of Macedonian wineries. The selected wine is then presented on the screen, accompanied by detailed information about its characteristics, grape variety and year of production. Additionally, the application provides information on the nearest wineries where the user can purchase the showcased wine.

Another functionality of our application is the wine search feature. This allows the users to search for specific wines based on their type, region, winery and price range.

"Give me wine" aims to be an interactive and user friendly platform for discovering all the wines Macedonia has to offer.
